

Real user performance monitoring for Web-based enterprise applications

Enterprise Analyzer Lite brings you Triometric's comprehensive, award-winning performance monitoring in a low cost package with no staff training or maintenance required.

This innovative solution delivers KPIs for performance, reliability and usage, straight to your desktop at regular intervals. It's an ideal way to manage large-scale Web application deployments and upgrades.

If you can't measure it you can't manage it

Forget the anecdotal and find out what's really happening. Detect bottlenecks, apply infrastructure fixes, correct end user processes - and compare improvement week on week.

Manage what counts: your end users' experience

Understand each and every user transaction. Enterprise Analyzer Lite identifies end-to-end response times, reliability and usage for 100% of transactions, users and locations.

Mine traffic for Business Intelligence

Understand the profile of your traffic, the application's most frequently used features, and who your power users are.

Ensure a complete audit trail

Enterprise Analyzer Lite uses the same capture technology as its big brother, so all aspects of your application performance are visible 24/7. If you need more detail or further analysis, it's all there in Enterprise Analyzer.

Three easy steps to proactive Web application management:

1

Install the Triometric Monitor. Triometric provides a simple server that sets up in minutes. The Monitor is non-intrusive with no impact on your infrastructure, application or users.

2

Agree the KPIs with Triometric. We work with you to agree the performance, reliability and usage KPIs that are relevant to your business.

3

Agree the KPI recipients and the delivery interval.

Maximise the ROI of your Web-based applications
